Homer Reid's Solutions to Goldstein Problems: Chapter 9 7. Problem 9.6. The transformation equations between two sets of coordinates are.  $Q = \log(1 + q^{1/2} \cos p)$   $P = 2(1 + q^{1/2} \cos p)q^{1/2} \sin p$  (a) Show directly from these transformation equations that  $Q, P$  are canonical variables if  $q$  and  $p$  are.

Equation (3.45) in Goldstein page 90, states that for small deviations from circularity conditions,  $1 = u_0 + a \cos r$   
Substitution of this into the force law gives equation (3.46)  $u^2 = 3 +$  Solve this with  $f = mCr + k/r^2$   $df^2 k = 3 + mC$   
 $dr r^2 = 3 + r^2 =$  Now  $k r^2 + 4mCr k r^2 + mCr$

The course I took covered Lagrangian and Hamiltonian mechanics and also covered Poisson brackets and the Hamilton-Jacobi formulation. I found the book Introductory Classical Mechanics by David Morin to be useful and have many problems with detailed solutions for it. It was especially useful for the Lagrangian part of the course.
