Model-driven engineering (MDE) is a software development methodology that focuses on creating and exploiting domain models, which are conceptual models of all the topics related to a specific problem. Hence, it highlights and aims at abstract representations of the knowledge and activities that govern a

Model-driven software engineering (MDE) aims to address this crisis by permitting better separation of concerns. For example, software specialists may develop domain-specific languages (DSLs), which domain experts use to express a model of each concern in terms familiar to the domain experts.
