There are no symptoms unique to thyroiditis. If the thyroiditis causes slow and chronic thyroid cell damage and destruction, leading to a fall in thyroid hormone levels in the blood, patients experience the symptoms of hypothyroidism (see Hypothyroidism brochure). Typical hypothyroid symptoms include fatigue, weight gain, constipation, dry skin, depression and poor exercise tolerance.

### Thyroiditis | American Thyroid Association

Thyroid nodules are very common, and although the majority are benign, approximately 5% may harbor malignancy. The evaluation of the patient with solitary thyroid nodule is generally straightforward and will typically include measurement of serum TSH to assess thyroid function and fine-needle aspiration biopsy of the nodule, with or without ultrasound (US) guidance.
